

UHMS User Manual

Current system state as of May 2, 2026.

This manual is workflow-first. Each section walks you through what to do, in what order, and which screen to use. It is illustrated with screenshots from the running system and includes flow diagrams for the most important processes.

Table of Contents

- 1. Purpose and Audience
- 2. Getting Started
- 3. Roles and Typical Responsibilities
- 4. Main Navigation Areas
- 5. Standard Page Controls
- A. End-to-End Patient Journey

- 25. Profile and Password
- 26. Recommended Operational Workflows
- 27. Troubleshooting
- 28. Current Implementation Notes
- 29. Quick Reference by Department

1. Purpose and Audience

UHMS is a hospital management system for patient registration, OPD visits, appointments, triage, consultation, investigations, prescriptions, billing, pharmacy dispensing, insurance claims, wards, inventory, HR, reports, and administration.

This manual is intended for the staff who actually use the system every day:

- Reception, registration, and front-desk staff
- Nurses and triage personnel
- Doctors and clinicians
- Investigation/laboratory staff and analyzer operators
- Pharmacy staff and dispensers
- Cashiers, accountants, and claims officers
- Store and procurement staff
- HR officers and payroll processors
- Administrators, supervisors, and module owners

What appears on your screen depends on three things:

1. Your **role** (for example, Doctor, Nurse, Cashier).
2. Your **permissions**, which an administrator can adjust per role.
3. Which **modules** are enabled in Settings > Modules.

If a step in this manual mentions a menu item you cannot see, that almost always means your role is missing the relevant permission or the module is disabled.

1.1 The big picture

A UHMS encounter typically moves through this lifecycle:

The lifecycle above is the backbone of nearly every operational workflow in this manual. When in doubt, locate where a patient currently is on this diagram and the next step is usually obvious.

2. Getting Started

2.1 Login

1. Open the UHMS application URL.
2. Enter your email and password.
3. Select Login.
4. The system redirects you to the correct dashboard for your role.

The login screen is the entry point for all staff. Users must authenticate before accessing patient, clinical, financial, or administrative pages.

2.2 Dashboards

UHMS routes users to a dashboard based on role:

Role group	Dashboard behavior
Super Admin, Admin	Admin dashboard
Doctor	Doctor dashboard
Nurse, Receptionist, Pharmacist, Lab Technician, Accountant, Cashier, HR Manager, Store Manager	Staff dashboard
Other authenticated users	Admin dashboard fallback

2.3 Logging out

Use the user menu in the top-right header and select Log Out. Logout is intentionally handled as a normal secure browser request, not an SPA background action.

2.4 Navigation

Use the left sidebar to move through the system. The menu is permission-aware:

- If you do not have permission for a feature, it may not appear.
- If an optional module is disabled, its menu items may not appear.
- Some menu groups expand to show sub-pages.
- Most internal navigation now uses the SPA bridge, so pages should open without full browser reloads.

2.5 Progressive Web App behavior

UHMS includes PWA basics:

1. The app exposes a web app manifest.
2. Supported browsers can offer installation to desktop or mobile home screen.
3. Static assets are cached by a service worker.
4. If the network is unavailable, the offline page explains that the system cannot continue until connection is restored.

Important: UHMS is an operational clinical system. Patient, billing, and authenticated pages are not designed to be fully used offline. Reconnect before entering or saving clinical, financial, or administrative data.

3. Roles and Typical Responsibilities

Role	Typical access
Super Admin	Full system access, modules, settings, users, roles, all workflows
Admin	Full operational access, settings, users, roles, all workflows
Doctor	Consultations, patient viewing, visits, prescriptions, investigation requests, procedures, wards where permitted
Nurse	Triage, vitals, queues, prescriptions view, ward/bed visibility
Receptionist	Patient registration, visits, appointments, queue management, invoice viewing
Lab Technician	Investigation requests, result entry, test catalog, analyzers
Pharmacist	Prescriptions, dispensing, drug catalog, drug stock, stock transfers
Accountant	Invoices, payments, service catalog, reports, claims, accounts, cashier handover
Claims Officer	Claims, invoices, claim review/export, reports
Store Keeper	Suppliers, purchase orders, stock transfers, pharmacy stock
HR Manager	Employees, attendance, leave, payroll, HR reports

Permission assignments may be changed by administrators in Roles & Permissions.

The dashboard gives administrators a quick view of operational totals, shortcuts, and the role-aware sidebar menu.

3.1 Permission and module visibility model

Three quick rules to remember:

1. Role grants permissions, not menus directly.
2. The sidebar hides anything the user has no permission for or that belongs to a disabled module.
3. The server still enforces permissions on every action, so a user who manipulates the URL still cannot perform an action they lack permission for.

4. Main Navigation Areas

4.1 Main Menu

- Dashboard

Use this to return to your role-aware dashboard.

4.2 Patient Services

- Patients
- Appointments
 - All Appointments
 - Calendar View
 - Schedule New
- Visits / OPD
- Queue
 - Manage Queue
 - Queue Board
- Triage

4.3 Clinical

- Consultations
- Vitals
- Medical Patterns
- Procedures
 - Procedure Catalog
 - Scheduled Procedures
- ICD-10 Codes

4.4 Ward / Inpatient

- Admissions
- Bed Map
- Wards
- Bed Management

4.5 Pharmacy

- Prescriptions
- Dispensing
- Drug Catalog
- Drug Stock

4.6 Investigations

- Investigation Requests
- Investigation Results
- Test Catalog
- Investigation Items
- Investigation Stock
- Analyzers
- Analyzer Messages

Some backend route names still use `lab` , but the user-facing workflow should be treated as Investigations.

4.7 Billing

- Invoices
- Payments
- Service Catalog
- Specialties

4.8 Claims & Insurance

- Claims
- New Claim
- Insurance Providers

4.9 Store & Procurement

- Suppliers
- Purchase Orders
- Stock Transfers

4.10 Accounts & Finance

- Account Categories
- Expenses
- Income
- Daily Collection
- Reconciliation
- Cashier Handover

4.11 HR & Payroll

- Employees
- Attendance
- Leave Requests
- Payroll

4.12 Reports

- Financial Reports
 - Income Report
 - Daily Collection
 - NHIS Report
 - Claims Report
 - Patient Statement
- Clinical Reports
 - Patient Report
 - Visit Report
 - Consultation Stats
 - Admissions Report
 - Discharges Report
 - Investigation Revenue
- Pharmacy & HR
 - Pharmacy Sales
 - Sales Summary
 - Stock Valuation
 - Expired Stock
 - Leave Report
 - Payroll Report

4.13 Administration

- Users
 - All Users
 - Add User
- Roles & Permissions
- Departments
- Designations

4.14 Notifications

- Notifications list
- Recent notifications in the header dropdown
- Mark single notification as read
- Mark all notifications as read

4.15 Settings

- Organization
- Invoice Settings
- Payment Methods
- Activity Log
- Modules

5. Standard Page Controls

Most list pages follow the same pattern:

1. Use filters to narrow records by date, status, department, staff member, or search text.
2. Use action buttons or row menus to view, edit, approve, process, cancel, print, or export records.
3. Status badges show the current workflow state.
4. Success and error alerts appear near the top of the page after actions.
5. Some actions update the page inline without forcing a full reload.

5.1 Common UI elements

Element	Purpose	Tip
Search box	Free-text search over the list	Hit Enter to apply; clear it to reset
Filter row	Narrow by status, date, department, role, etc.	Combine filters to drill down quickly
Status badge	Current workflow state of the record	Color reflects severity / progression
Row action menu	Per-row operations (View, Edit, Cancel, etc.)	Available actions vary by status and permission
Bulk actions	Apply one operation to multiple records	Tick checkboxes first
Toast / alert	Confirmation or error messages	Most actions show a toast in the top-right
Print / PDF link	Open a printable document	Opens in a new tab and bypasses the SPA

5.2 Uniform screen design

UHMS screens now follow a shared design system so staff do not have to relearn controls from module to module.

1. Page titles appear in a consistent header with the main action on the right.
2. Search and filter controls use visible labels, compact spacing, and short actions such as Filter and Clear.
3. Tables use compact headers, row hover states, workflow badges, and right-aligned money columns.
4. Action buttons use familiar Tabler icons and short text; row-specific actions stay inside the row action menu.
5. The shared styling is loaded once through the application layouts, including older template pages, so the visual cleanup stays lightweight and fast.

5.3 What to do if a button is missing

1. Confirm you have permission for that action.
2. Confirm the related module is enabled (Settings > Modules).
3. Confirm the record's current status allows that action (e.g., you cannot "approve" a draft that has not been submitted yet).
4. Refresh the page to clear stale state.

A. End-to-End Patient Journey

This section combines every other module into one continuous example, from arrival to final settlement. Use it as a reference when training new staff.

The rest of this manual zooms into each step of the diagram above.

B. Role Day Journeys

Quick day-in-the-life walkthroughs by role. Each one points back to the detailed sections later in the manual.

B.1 Receptionist

1. Open Dashboard, review today's appointments.
2. Patient arrives:
 - Existing patient: search Patients > open profile.
 - New patient: Patients > Create.
3. If they had a booking: Appointments > All Appointments > Check In, which creates the visit automatically.
4. If walk-in: Visits / OPD > Create Visit.
5. Confirm payable services are correctly attached to the visit.
6. Send patient to triage queue.
7. Throughout the day, manage the queue board, confirm and reschedule appointments, and answer billing queries.

B.2 Triage nurse

1. Open Triage from the sidebar.
2. Open the next visit awaiting triage.
3. Record vitals and triage score.
4. Set priority (Routine, Urgent, Emergency).
5. Assign to a consultation department or move to emergency.
6. Repeat for the queue.

B.3 Doctor

1. Open Consultations to see today's assigned patients.
2. Open a visit to enter the consultation workspace.
3. Record complaints, examine, add diagnoses.
4. As needed: request investigations, prescribe, schedule procedures, refer, or admit.
5. Use Medical Patterns to speed up repetitive consultations.
6. Complete the visit when care is done; the system queues billing automatically.

B.4 Investigation/Lab technician

1. Open Investigation Requests.
2. Accept new pending requests.
3. Run the test on the analyzer or manually.
4. Enter results per request item; mark abnormal where applicable.
5. Verify results.
6. Use Analyzer Messages to reprocess any instrument message that failed.

B.5 Pharmacist / dispenser

1. Open Pharmacy > Dispensing.
2. Open the next prescription.
3. Confirm stock and dispense item by item, or use batch dispense.
4. Update stock through Pharmacy > Drug Stock as supplies arrive.
5. Watch stock alerts daily.

B.6 Cashier / accountant

1. Open shift via Accounts > Cashier Handover.
2. Open Billing > Receive Payments to collect outstanding invoices from the cashier queue.
3. Use Billing > Invoices when you need to review or create a specific invoice.
4. Record payments and print receipts.
5. End of shift: close handover, supervisor verifies.
6. Review Daily Collection and Reconciliation.

B.7 Claims officer

1. Open Claims > New Claim or create from a settled invoice.
2. Add and validate items.
3. Submit the claim.
4. Review tabs: pending, submitted, paid, appealed.
5. Export reports for the insurer when needed.

B.8 Store keeper

1. Suppliers: add or update partners.
2. Purchase Orders: create, submit, approve, receive.
3. Stock Transfers between pharmacy/investigation locations.

B.9 HR officer

1. Employees: maintain profiles.
2. Attendance: enter daily attendance.
3. Leave: review and approve requests.
4. Payroll: process, approve, mark paid.

B.10 Administrator

1. Users and Roles: provision new staff.
2. Departments and Designations: keep the org structure current.
3. Modules: enable / disable optional features.
4. Activity Log: review what happened.
5. Settings: organization, invoice, payment methods.

6. Patient Registration and Management

The screenshot displays the 'Preclinic' software interface for patient management. On the left is a sidebar menu with categories: Main Menu (Dashboard), Patient Services (Patients, Appointments, Visits / OPD, Queue, Triage), Clinical (Consultations, Vitals, Medical Patterns, Procedures, ICD-10 Codes), and Ward / Inpatient (Admissions). The main content area is titled 'Patients' with a 'Total: 102' badge and a '+ New Patient' button. Below the title is a search bar and several filter dropdowns: 'All Gender', 'All Blood', 'Filter by city..', and 'All Status'. There are also 'Filter' and 'Clear' buttons. The patient list is shown in a table with columns: Patient ID, Patient Name, Phone, Gender, Date of Birth, City, and Insurance. Four patients are visible in the list, each with a profile picture icon and a settings gear icon. The last row of the table is partially cut off.

Patient ID	Patient Name	Phone	Gender	Date of Birth	City	Insu
PT-20260421-0095	Ama Aidoo	0261233258	Female	27 Feb 1986	Wa	
PT-20260421-0096	KA Kwasi Antwi	0248586767	Male	16 Jan 2006	Sekondi-Takoradi	—
PT-20260421-0097	BA Beatrice Armah beatrice.armah68@gmail.com	0249644231	Female	20 Oct 1978	Bolgatanga	—
PT-20260421-0098	SQ Sandra Quaye sandra.quaye50@gmail.com	0261814255	Female	09 Sep 1988	Sekondi-Takoradi	—
PT-				05		

The Patients page is the main register for searching, reviewing, and opening patient records.

The Add Patient form captures demographics, contact, and identifying information needed downstream by visits, billing, claims, and reports.

6.1 Add a patient

1. Go to Patient Services > Patients.
2. Select Create or Add Patient.
3. Enter demographic and contact details.
4. Save the record.
5. Open the patient profile to review details.

6.2 Update patient information

1. Open the patient profile.
2. Select Edit.
3. Update the required fields.
4. Save changes.

6.3 Manage patient insurance

1. Open the patient profile.
2. Use the insurance section to add an insurance provider, tier, policy/member information, and validity dates.
3. Mark one policy as primary when appropriate.
4. Update or remove expired insurance records as needed.

6.4 Manage emergency contacts

1. Open the patient profile.
2. Use the emergency contacts section.
3. Add, edit, or remove contact records.

7. Appointments

The Appointments module covers booking, calendar, check-in, and lifecycle of every scheduled visit.

Appointment lifecycle

The All Appointments list shows status badges, doctor, department, and quick actions like Confirm, Check In, No Show, Cancel.

What Happens Next

- ✓ Appointment is Scheduled
- ✓ Patient can be notified
- ✓ On appointment day, staff checks patient in
- ✓ Check-in creates a new visit

The Schedule New form lets you pick patient, doctor, department, slot, visit type, reason, and any pre-attached services.

7.1 View appointments

1. Go to Patient Services > Appointments > All Appointments.
2. Review appointment statistics and the appointment list.
3. Filter by status, doctor, date, or search text.
4. Open an appointment to view details.

7.2 Use the calendar view

The screenshot shows the Preclinic Appointment Calendar interface. On the left is a sidebar with a 'Main Menu' containing 'Dashboard', 'Patient Services' (with a sub-menu for 'Appointments'), 'Visits / OPD', 'Queue', 'Triage', and 'Clinical' (with sub-items 'Consultations', 'Vitals', 'Medical Patterns', and 'Procedures'). The main area is titled 'Appointment Calendar' and includes a search bar, a 'List View' toggle, and a '+ New Appointment' button. Below these are filters for 'Week Starting' (27-Apr-2026), 'Doctor' (All Doctors), and 'Department' (All Departments), with 'Filter' and 'Clear' buttons. Navigation buttons for '< Previous Week', '27 Apr — 10 May 2026', 'Today', and 'Next Week >' are present. The 'Selected Week' (27 Apr — 03 May 2026) is displayed as a table with columns for Monday through Saturday. The Saturday column (02 May) shows a '+ No appointments' button. Below this is the 'Next Week' (04 May — 10 May 2026) table, which is currently empty.

Monday 27 Apr	Tuesday 28 Apr	Wednesday 29 Apr	Thursday 30 Apr	Friday 01 May	Saturday 02 May
No appointments	No appointments	No appointments	No appointments	No appointments	No appointments +

Monday 04 May	Tuesday 05 May	Wednesday 06 May	Thursday 07 May	Friday 08 May	Saturday 09 May

The appointment calendar groups bookings by day and supports week navigation, doctor filters, and department filters. It shows the selected week first and the next week directly below it, so schedulers can see two weeks at a time without changing screens.

1. Go to Patient Services > Appointments > Calendar View.
2. Choose a week start date.
3. Optionally filter by doctor or department.
4. Review both the selected week and the next week before booking or moving an appointment.
5. Use Previous Week, Today, or Next Week to move through the calendar.
6. Select an appointment card to open the appointment.
7. Use the plus button on future dates to schedule a new appointment for that date.

7.3 Schedule an appointment

1. Go to Patient Services > Appointments > Schedule New.
2. Select or search for the patient.
3. Select department, doctor, date, time, visit type, and reason.
4. Add services where applicable.
5. Save the appointment.

7.4 Confirm or update appointment status

1. Open All Appointments.
2. Use the row action menu.
3. Choose Confirm, Check In, No Show, Cancel, Edit, or View Details depending on the current status and permissions.
4. Inline actions should return confirmation feedback without a full page reload.

7.5 Check in an appointment

1. Locate a confirmed appointment.
2. Select Check In.
3. UHMS creates a visit linked to the appointment.
4. Open the created visit when prompted.

8. Visits / OPD Workflow

A visit is the central operational record connecting patient, services, departments, billing, and clinical data.

What Happens Next

- Visit is registered
- Patient moves to Waiting
- Staff pushes to Triage → queue
- # assigned

The Create Visit form supports walk-in registration with patient search, department/doctor pick, service selection, insurance, and priority.

8.1 Create a walk-in visit

1. Go to Patient Services > Visits / OPD.
2. Select Create Visit.
3. Search for or select the patient.
4. Choose visit type, department, doctor, insurance, services, and priority where applicable.
5. Save the visit.
6. The system creates a visit number and moves the patient into the next workflow state.

8.2 View visits

The screenshot displays the 'Preclinic' interface for 'Visits / OPD'. The left sidebar contains a 'Main Menu' with options like Dashboard, Patients, Appointments, Visits / OPD (selected), Queue, Triage, and Clinical sections including Consultations, Vitals, Medical Patterns, Procedures, ICD-10 Codes, and Admissions. The main content area features a 'Visits / OPD' header with 'Queue Board' and 'New Visit' buttons. Below this is a dashboard with six colored boxes showing counts: Today's Total (0), Waiting (0), Consulting (0), Completed (0), Emergency (0), and Cancelled (0). A search filter section includes fields for 'Search' (Visit #, patient name, etc.), 'Status' (All Status), 'Visit Type' (All Types), and 'Date From' (02-May-2). Below the filters is a table with columns: Visit #, Patient, Age, Type, Priority, Doctor, Status, Date, Duration, and Actions. The table currently shows 'No visits found' with a crossed-out icon. The footer indicates '© UHMS - Ultimate Hospital Management System'.

The Visits / OPD page shows visit status, patient details, linked appointment information, and workflow actions.

1. Go to Visits / OPD.
2. By default, the list focuses on today's visits unless search or date filters are used.
3. Filter by date range, doctor, status, or search text.
4. Open a visit to review patient, services, department, doctor, billing, and workflow details.

8.3 Transition a visit

Users with transition permission can move visits through workflow states. Common transitions include sending the patient to triage, consultation, investigation, completion, referral, or admission-related flow depending on current status and business rules.

9. Queue Management

The queue ties triage, departments, and consultations together so staff always see who is next.

Manage Queue is for staff who control flow: call next, complete, skip, or requeue patients.

Queue Board is a public-display friendly view for waiting rooms and department screens.

9.1 Manage queue

1. Go to Patient Services > Queue > Manage Queue.
2. Review waiting patients and service queues.
3. Call next, complete, skip, or requeue patients as needed.

9.2 Queue board

1. Go to Patient Services > Queue > Queue Board.
2. Use this display for waiting room or department queue visibility.

10. Triage and Vitals

Triage is the first clinical touchpoint after registration. It computes urgency and routes the patient.

The triage queue shows visits awaiting assessment, with patient, time waiting, and priority cues.

The vitals form captures temperature, blood pressure, pulse, respiration, oxygen saturation and other measurements.

10.1 Open triage queue

1. Go to Patient Services > Triage.
2. Review patients awaiting triage.
3. Open a patient for assessment.

10.2 Record vitals

1. Open the visit's triage or vitals screen.
2. Enter temperature, blood pressure, pulse, respiratory rate, oxygen saturation, and other available fields.
3. Select or confirm priority where required.
4. Save the triage record.

10.3 Send patient onward

After triage, the patient may be assigned to consultation, moved to another department, or treated according to urgency. The exact available actions depend on visit status and staff permissions.

11. Consultations

The consultation workspace is where doctors record their work for a visit. It is the system's clinical heart.

Medical Patterns store reusable bundles (complaints + diagnoses + treatments + prescriptions + investigations) that doctors can apply with one click.

ICD-10 search is integrated into diagnoses for accurate clinical coding.

11.1 Open consultation list

The consultation list helps clinicians find consultable visits and filter by visit type, date, assignment, or patient search.

1. Go to Clinical > Consultations.
2. By default, the list focuses on today's outpatient consultable visits.
3. Filter by search text, visit type, date range, or My Patients.
4. Open a visit to enter the consultation workspace.

11.2 Consultation workspace

The consultation screen can include:

- Patient summary
- Visit information
- Vitals
- Medical history
- Complaints
- Diagnoses
- Investigations
- Treatments
- Prescriptions
- Tasks
- Medical patterns
- Investigation request tools

11.3 Add complaints

1. Open a consultation.
2. Add presenting complaints.
3. Save each complaint.
4. Remove incorrect entries when needed.

11.4 Add diagnoses

1. Open the diagnosis section.
2. Add diagnosis details.
3. Mark the primary diagnosis where applicable.
4. Use ICD-10 search/coding if available.
5. Save changes.

11.5 Add treatment notes

1. Use the treatment section.
2. Enter treatment plan, advice, procedures, or notes.
3. Save the treatment item.

11.6 Create prescription

1. Open the prescription section.
2. Add one or more drug items.
3. Enter dosage, frequency, duration, and instructions.
4. Save the prescription.
5. Pharmacy users can later dispense it.

11.7 Request investigations

1. Open the investigation request section.
2. Select the target investigation department.
3. Choose catalog tests or enter free-text investigation items when applicable.
4. Add clinical information and urgency.
5. Submit the request.
6. The request appears in the Investigation Requests queue.

11.8 Refer a patient

1. Use the referral action in the consultation workflow.
2. Select the receiving department.
3. Enter referral reason or notes.
4. Submit. The visit is routed for follow-up according to workflow rules.

11.9 Medical patterns

Medical patterns allow doctors to reuse common sets of complaints, diagnoses, treatments, prescriptions, or investigation plans.

Common actions:

1. Open Clinical > Medical Patterns.
2. Create a pattern manually or save one from a consultation record.
3. Apply a pattern during a future consultation.
4. Toggle active status when a pattern should no longer be suggested.

12. Investigations

The Investigations module covers the full lifecycle of test requests from the moment a doctor orders them until results are verified.

Investigation Results lists all entered results, supports filtering, and lets authorized staff verify entries.

Test Catalog manages categories and individual tests, each with parameter definitions and reference ranges.

Investigation Items is the catalog of consumables and reagents.

Investigation Stock tracks reagent and consumable inventory per investigation department.

Analyzer integration manages connected lab instruments, mappings, and message diagnostics.

12.1 View investigation requests

The screenshot shows the 'Preclinic' web application interface. On the left is a sidebar menu with categories: Main Menu (Dashboard), Patient Services (Patients, Appointments, Visits / OPD, Queue, Triage), Clinical (Consultations, Vitals, Medical Patterns, Procedures, ICD-10 Codes), and Ward / Inpatient (Admissions). The main content area is titled 'Investigation Requests'. At the top, there are four status cards: Pending (0), Processing (0), Completed Today (0), and Active Tests (0). Below these are search and filter controls, including a search bar, dropdowns for Status, Department, and Urgency, and date range pickers. A table with columns: Request #, Patient, Department, Type, Urgency, Status, Progress, Date, and Action is displayed. The table is currently empty, showing a message 'No investigation requests found.' with a magnifying glass icon. At the bottom, there is a footer that reads '© UHMS - Ultimate Hospital Management System'.

Investigation staff use this queue to filter, accept, process, and track requests from consultations.

1. Go to Investigations > Investigation Requests.
2. Filter by status, urgency, department, date range, or search text.
3. Open a request to process it.

12.2 Accept a request

1. Open a pending request.
2. Select Accept.
3. The request and pending items move into processing status.

12.3 Enter results

1. Open a processing request.
2. Enter results for each request item.
3. Depending on result type, enter parameter values, rich text, or upload a file result.
4. Mark abnormal results where applicable.
5. Save.
6. When all request items are completed, the request status becomes completed.

12.4 Verify results

1. Open an entered result.
2. Select Verify if you have result creation/verification permission.
3. The result records verifier and verification time.

12.5 Test catalog

Use Test Catalog to maintain investigation categories and catalog tests.

Typical actions:

1. Add or update test categories.
2. Add or update tests.
3. Toggle tests active/inactive.
4. View tests by category.

12.6 Investigation items and stock

Use Investigation Items and Investigation Stock for consumables or stock items used by investigation departments.

Typical actions:

1. Maintain item catalog.
2. Add or update stock.
3. Search items.
4. Check available stock.

12.7 Analyzer integration

Analyzer tools are for configuring lab instruments and checking diagnostic messages.

Typical actions:

1. Go to Investigations > Analyzers.
2. Add or update analyzers.
3. Configure mappings.
4. View diagnostics or analyzer messages.
5. Reprocess messages if needed.

13. Pharmacy

The Pharmacy module handles prescriptions, dispensing, drug catalog, and stock.

© UHMS - Ultimate Hospital Management System

The Prescriptions list shows every prescription created in consultations and their dispensing status.

The Dispensing screen is the pharmacist's main workspace for fulfilling prescriptions.

Drug Catalog manages drugs, dosage forms, strengths, and categories.

Drug Stock tracks batches, quantities, and expiry; the alerts section highlights low and expired stock.

13.1 View prescriptions

1. Go to Pharmacy > Prescriptions.
2. Open a prescription to review prescribed items.
3. Cancel prescriptions if permitted and clinically appropriate.

13.2 Dispense medication

1. Go to Pharmacy > Dispensing.
2. Open a prescription.
3. Dispense individual items or use batch dispensing.
4. Confirm quantities and instructions.
5. Review dispensing history when required.

13.3 Drug catalog

Use Drug Catalog to manage drugs, categories, strengths, dosage forms, and active status.

Typical actions:

1. Add a drug.
2. Update a drug.
3. Toggle active/inactive.
4. Search drugs.
5. Review drug history.

13.4 Drug stock

Use Drug Stock to manage available inventory and stock alerts.

Typical actions:

1. Add stock records.
2. Update stock records.
3. Review low stock or expiry alerts.

14. Billing and Payments

Billing turns clinical activity into invoices and payments. It links into visits, services, claims, and accounts.

The Invoices page centralizes billing status, outstanding balances, payments, and invoice actions.

The Create Invoice form pulls billable items from a selected visit and lets the cashier add or adjust lines.

The Payments list records all transactions; receipts are printable per payment.

The Receive Payments page is the cashier-focused queue for unpaid and partially paid invoices.

The Service Catalog defines billable services and price tiers (cash vs. insurance).

Specialties group services and departments by clinical discipline.

14.1 View invoices

The screenshot shows the 'Preclinic' interface with a sidebar menu on the left and a main content area. The sidebar includes sections for 'Main Menu' (Dashboard), 'Patient Services' (Patients, Appointments, Visits / OPD, Queue, Triage), 'Clinical' (Consultations, Vitals, Medical Patterns, Procedures, ICD-10 Codes), and 'Ward / Inpatient' (Admissions). The main content area is titled 'Invoices' and features a '+ New Invoice' button. Below this are four summary cards: '1 Total Invoices', '1 Pending', 'C0.00 Today's Revenue', and 'C342.50 Outstanding'. A search bar and filters for 'All Statuses' and 'All Billing Types' are present. A table lists invoices with columns for Invoice #, Patient, Billing Type, Total, Paid, Balance, and Status. The first row shows invoice INV-20260423-0001 for Ama Aidoo, with a total of C342.50, no payments, and a pending balance of C342.50. The footer indicates '© UHMS - Ultimate Hospital Management System'.

Invoice #	Patient	Billing Type	Total	Paid	Balance	Status
INV-20260423-0001	Ama Aidoo PT-20260421-0095	Consult	C342.50	C0.00	C342.50	Pending

The Invoices page centralizes billing status, outstanding balances, payments, and invoice actions.

1. Go to Billing > Invoices.
2. Filter by status, billing type, or search text.
3. Open an invoice to review items, patient, visit, payments, and totals.

14.2 Create invoice

1. Go to Billing > Invoices > Create.
2. Select patient or visit.
3. If a visit is selected, UHMS can suggest billable items from visit services, investigations, and prescriptions.
4. Add or update invoice items.
5. Select billing type, tax, discount, due date, and notes.
6. Save the invoice.

14.3 Receive payments as cashier

1. Go to Billing > Receive Payments.
2. Review the summary cards: invoices waiting, outstanding balance, collections today, and cash shift state.
3. Search or filter the unpaid invoice queue by patient, invoice, visit, status, or billing type.
4. Enter the amount to collect. The form defaults to the remaining balance.
5. Choose the payment method and enter a transaction reference when available.
6. Select Receive. UHMS updates the invoice balance, records the payment, and keeps the payment visible in Payment History and Daily Collection.

Cash is disabled when the cashier has no open shift. Open the shift from Accounts > Cashier Handover before accepting cash. Mobile money, card, bank transfer, cheque, and similar non-cash payments can still be recorded according to your facility policy. NHIS is not treated as a manual cashier collection method; it belongs in the claims workflow.

14.4 Record payment from an invoice

1. Open the invoice.
2. Use the payment form.
3. Enter amount, payment method, and reference details.
4. Save payment.
5. UHMS updates invoice payment status and provides receipt access.

14.5 Print invoice or receipt

1. Open the invoice or payment.
2. Use Print Invoice or Receipt actions where available.
3. Print/PDF links intentionally bypass SPA interception and open normally.

14.6 Service catalog and specialties

Use Service Catalog to maintain billable services and prices. Use Specialties to maintain clinical specialty groupings used in services, appointments, and departments.

14.7 Billing and accounting coherence

Patient money collected against invoices is stored as payments. Manual income and expenses are stored separately as financial entries. This keeps reports, handover, and reconciliation from counting the same revenue twice.

Use this rule of thumb:

Situation	Use
Patient pays an invoice	Billing > Receive Payments or the invoice payment form
Cashier wants to see what they collected today	Billing > Payment History or Accounts > Daily Collection
Accountant records non-patient income	Accounts > Income
Accountant records operational expenses	Accounts > Expenses
Supervisor checks payment totals against shift cash	Accounts > Cashier Handover and Reconciliation

15. Claims and Insurance

Claims modules handles insurer-funded patient care, from provider setup through to reimbursement.

The Claims list lets officers filter by status, insurer, and patient and act per row.

Create Claim

The New Claim form binds patient, insurer, and invoice into a submittable claim.

Insurance Providers maintains insurers and their tier structure.

15.1 Insurance providers and tiers

1. Go to Claims & Insurance > Insurance Providers.
2. Add providers.
3. Manage tiers under each provider.
4. Toggle provider status if needed.

15.2 Create claim

1. Go to Claims & Insurance > New Claim.
2. Select patient, provider, invoice, or visit context as required.
3. Add claim items.
4. Save the claim.

15.3 Create claim from invoice

1. Open or locate an eligible invoice.
2. Use claim creation from invoice where available.
3. Review claim items before submitting.

15.4 Submit and review claim

1. Open a claim.
2. Submit the claim when ready.
3. Claim reviewers can open the review screen.
4. Review individual items.
5. Complete review.
6. Mark paid when reimbursement is received.
7. Appeal if applicable.

15.5 Export claims

Users with export permission can export claim data from the claims list.

16. Ward and Inpatient

The Ward module manages admissions, beds, rounds, and discharge.

16.1 Admissions

1. Go to Ward / Inpatient > Admissions.
2. Select Create Admission when permitted.
3. Choose patient, ward, bed, admitting diagnosis, and admission details.
4. Save admission.
5. Open admission to review inpatient details.

16.2 Admission rounds, vitals, and services

From an admission record, permitted users can:

1. Add ward rounds.
2. Record inpatient vitals.
3. Add inpatient services.

16.3 Discharge

1. Open the admission.
2. Select Discharge.
3. Enter discharge details.
4. Process discharge.

16.4 Bed map and bed management

- 1. Use Bed Map to view bed occupancy.
- 2. Use Wards to manage wards.
- 3. Use Bed Management to add or update beds.

19.1 Account categories

Use Account Categories to classify income and expenses.

19.2 Expenses and income

1. Go to Expenses or Income.
2. Create an entry.
3. Enter category, amount, date, description, and supporting details.
4. Save entry.
5. Approve entries if you have approval permission.

Do not use manual income entries for patient invoice payments. Patient collections should be recorded through Billing so invoice balances, receipts, daily collections, and cashier shift totals stay aligned.

19.3 Daily collection

Use Daily Collection to review payments and collected revenue for a day or period. Patient payment totals come from Billing payments, while manual financial entries remain labeled separately.

19.4 Reconciliation

Use Reconciliation to compare expected collections with actual payments or handover records.

19.5 Cashier handover

1. Open Cashier Handover.
2. Open a cashier shift.
3. Collect cash payments only while the shift is open.
4. Close the shift at the end of the period and enter the actual cash counted.
5. A supervisor or authorized user verifies the shift.

Total: 16

+ Add Department

Code	Name	Type	Result Type	Stock Managed	Users	Status	Actions
OPD	General Medicine / OPD	Consultation	None	—	0	Active	
PED	Pediatrics	—	None	—	1	Active	
OBG	Obstetrics & Gynecology	—	None	—	1	Active	
SUR	Surgery	—	None	—	1	Active	
ORT	Orthopedics	—	None	—	0	Active	
EYE	Eye Clinic	Consultation	None	—	0	Active	
ENT	ENT	—	None	—	0	Active	
DEN	Dental	Consultation	None	—	0	Active	
PSY	Psychiatry	—	None	—	0	Active	

22.1 Users

1. Go to Administration > Users.
2. View all users.
3. Add a user.
4. Edit user details.
5. Toggle user active status.

22.2 Roles and permissions

1. Go to Administration > Roles & Permissions.
2. Create or update roles.
3. Open role permissions.
4. Assign permissions carefully.
5. Save changes.

Note: Removing permissions immediately changes what affected users can access.

22.3 Departments

Use Departments to manage clinical and operational departments.

Key department behavior:

- Active departments appear in relevant dropdowns.
- Departments that accept investigation requests appear in consultation investigation workflows.
- Department settings may affect routing and service availability.

22.4 Designations

Use Designations to manage staff job titles and classifications.

23. Settings and Modules

The screenshot displays the Preclinic application interface. On the left is a sidebar menu with categories: Main Menu (Dashboard), Patient Services (Patients, Appointments, Visits / OPD, Queue, Triage), Clinical (Consultations, Vitals, Medical Patterns, Procedures), and Ward / Inpatient (Admissions). The main content area is titled 'Settings' with a breadcrumb 'Dashboard / Organization Settings'. A left-hand sub-menu lists categories: ACCOUNT (Profile Settings), GENERAL (Organization, Invoice Settings, Payment Methods), and SYSTEM (Activity Log). The 'Organization' option is selected. The 'Organization Information' form contains fields for Company Name, Email Address, Phone, Website, Address, City, Region, and Postal Code. A 'Logo' section includes a 'Choose File' button and a 'No file chosen' status, with a note 'Max 2MB. Accepted: JPEG, PNG, JPG'. A 'Save Changes' button is at the bottom right. The top of the interface features the Preclinic logo, a search bar, and user profile icons.

23.1 Organization settings

Use Organization settings to manage hospital or facility identity and organization-level information.

23.2 Invoice settings

Use Invoice Settings to configure invoice display, numbering, or related billing presentation settings where available.

23.3 Payment methods

Use Payment Methods to configure available payment options.

23.4 Activity log

Use Activity Log to review significant system actions.

23.5 Modules management

Administrators use Modules Management to control which optional feature groups are available in the sidebar and protected routes.

Modules control which optional feature groups are shown and available in navigation.

Core modules cannot be disabled:

- Authentication
- Users & Roles
- Patients
- Visits
- Triage
- Consultation
- Departments
- Services
- Billing
- Settings

Optional modules can be enabled or disabled:

- Insurance
- Claims, depends on Insurance
- Pharmacy
- Inventory/Store
- Investigations
- Analyzer, depends on Investigations
- HR
- Payroll, depends on HR
- Reports
- Medical Patterns
- Notifications

To manage modules:

1. Go to Settings > Modules.
2. Review enabled/disabled status.
3. Toggle a non-core module.
4. If disabling a module, disable dependent modules first.
5. If enabling a dependent module, enable its parent module first.
6. Flush module cache if menu visibility does not update as expected.

24. Notifications

Notifications alert users about clinical events, billing actions, claim status changes, stock alerts, and system messages.

24.1 Header notification dropdown

The header shows recent notifications and an unread badge.

Common actions:

1. Open the notification bell.
2. Select a notification to view related content.
3. Use Mark all read to clear unread notifications.

24.2 Notifications page

Go to Notifications to view a full list of notifications.

25. Profile and Password

The screenshot shows the 'Preclinic' application interface. On the left is a sidebar menu with categories: Main Menu (Dashboard), Patient Services (Patients, Appointments, Visits / OPD, Queue, Triage), Clinical (Consultations, Vitals, Medical Patterns, Procedures, ICD-10 Codes), and Ward / Inpatient (Admissions). The main content area is titled 'Settings' with a sub-header 'Dashboard / Profile Settings'. A left-hand sub-menu lists 'ACCOUNT' (Profile Settings), 'GENERAL' (Organization, Invoice Settings, Payment Methods), and 'SYSTEM' (Activity Log). The 'Profile Information' section contains a profile photo placeholder (labeled 'SA'), a 'Choose File' button, and a file size limit of 'Max 2MB. JPEG, PNG, JPG'. Below this are input fields for 'First Name' (System), 'Last Name' (Administrator), 'Email' (admin@uhms.local), 'Phone' (0200000000), 'Gender' (Male), 'Date of Birth' (dd-----yyyy), 'Department' (N/A), and 'Role' (Super Admin). An 'Update Profile' button is at the bottom right.

All authenticated users can access their profile.

Typical actions:

1. Open the user menu in the header.
2. Select My Profile.
3. Update profile details.
4. Change password from the password section.

26. Recommended Operational Workflows

26.1 Standard OPD walk-in flow

1. Reception registers or finds patient.
2. Reception creates visit.
3. Patient is queued for triage.
4. Nurse records vitals and triage details.
5. Patient is assigned to consultation.
6. Doctor performs consultation.
7. Doctor may prescribe medication, request investigations, refer, admit, or complete visit.
8. Billing creates or reviews invoice.
9. Patient pays or invoice is routed for insurance/claims.
10. Pharmacy dispenses prescribed drugs if applicable.
11. Investigation department processes requests if applicable.
12. Visit is completed after care and billing workflow are done.

26.2 Appointment-to-visit flow

1. Reception schedules appointment.
2. Staff confirms appointment.
3. Patient arrives.
4. Staff checks in appointment.
5. UHMS creates linked visit.
6. Visit continues through triage, consultation, billing, and any downstream workflows.

26.3 Consultation-to-investigation flow

1. Doctor opens consultation.
2. Doctor selects target investigation department.
3. Doctor selects tests/items and submits request.
4. Investigation staff accepts request.
5. Results are entered and optionally verified.
6. Doctor reviews completed results from the consultation or patient history.

26.4 Prescription-to-dispensing flow

1. Doctor creates prescription during consultation.
2. Pharmacist opens dispensing queue.
3. Pharmacist reviews prescription items.
4. Pharmacist dispenses individual items or batch dispenses.
5. Stock records and dispensing history are updated according to configured workflow.

26.5 Invoice-to-payment flow

1. Accountant or cashier creates invoice or opens an existing invoice.
2. User records payment.
3. UHMS updates invoice status.
4. Receipt can be opened or printed.
5. Fully paid visits may move toward completion depending on workflow rules.

26.6 Insurance claim flow

1. Patient has insurance configured.
2. Invoice is created for covered services.
3. Claim is created manually or from invoice.
4. Claim is submitted.
5. Claim officer reviews items.
6. Claim is marked paid, appealed, or otherwise followed up.

27. Troubleshooting for Users

27.1 I cannot see a menu item

Possible reasons:

- Your role lacks the required permission.
- The module is disabled.
- Your user account is inactive.
- The page is restricted to a different role.

Ask an administrator to check Roles & Permissions and Settings > Modules.

27.2 Page did not update after an action

1. Check for success or error alerts.
2. Refresh the page if needed.
3. If using the PWA install, confirm network connectivity.
4. Report persistent issues to system support.

27.3 Offline message appears

The network is unavailable or the server cannot be reached. Reconnect and refresh before entering or saving data.

27.4 A print or PDF link opens outside the SPA flow

This is expected. Print and PDF views use normal browser navigation so they can open printable pages reliably.

27.5 Appointment calendar shows no records

1. Check the selected week.
2. Clear doctor and department filters.
3. Confirm appointments exist for that date range.
4. Confirm your role has appointment view permission.

28. Current Implementation Notes

- The system uses role and permission based access control.
- Sidebar visibility is controlled by both permissions and module status.
- Most existing Blade pages are served through a legacy Inertia/Vue bridge for SPA-style navigation.
- Some backend routes still use old names such as `1ab` , but the user-facing language is Investigation.
- The PWA currently provides install metadata, static asset caching, and an offline information page. It does not provide offline clinical data entry.
- Print, export, and PDF actions may use full-page browser behavior by design.

29. Quick Reference by Department

Reception

- Register patients.
- Schedule appointments.
- Check in appointments.
- Create visits.
- Manage queues.
- View invoices where permitted.

Nursing

- Manage triage queue.
- Record vitals.
- Update visit priority.
- Assign patients for consultation.
- View ward/bed information where permitted.

Doctors

- Open consultations.
- Record complaints, diagnoses, treatments, and prescriptions.
- Request investigations.
- Refer patients.
- View patient history.
- Use medical patterns.

Investigation staff

- View investigation request queue.
- Accept requests.
- Enter and verify results.
- Maintain test catalog and investigation stock where permitted.
- Manage analyzer diagnostics where permitted.

Pharmacy

- View prescriptions.
- Dispense medications.
- Maintain drug catalog.
- Manage stock and alerts.

Billing and accounts

- Create invoices.
- Record payments.
- Print invoices and receipts.
- Manage account entries.
- Review daily collection and reconciliation.
- Manage cashier handover.

Claims

- Manage insurance providers and tiers.
- Create and submit claims.
- Review claim items.
- Mark claims paid or appeal.
- Export claim data.

Store

- Manage suppliers.
- Create and approve purchase orders.
- Receive purchases.
- Manage stock transfers.

HR

- Manage employees.
- Record attendance.
- Manage leave.
- Process payroll.

Administrators

- Manage users and roles.
- Manage departments and designations.
- Configure organization, invoices, and payment methods.
- Review activity logs.
- Enable or disable modules.
